

Management

Feature	Description
Enterprise policy	Policy can be assigned to gateways, arrays, or enterprise-wide.
Easy-to-use wizards	Forefront TMG simplifies configuration with multiple wizards for features such as Web publishing, Web access, and array configuration.
Real-time monitoring and reporting	Logs may be viewed real-time or historically – including active sessions.
Query building	With a built-in query tool, historical data can be found quickly. Complex queries can be built.
Report creation and publishing	Reports can be designed for specific needs and then published locally or to a network file share.
External logging	Logs may be sent to a Microsoft SQL Server located on the internal network.
Delegated permissions	Admin roles can be delegated to users or groups.
